

Environmental Information for the Electricity Products Offered by: NewEnergy

(This is a new energy product. NewEnergy has made no guarantee as to the environmental characteristics of the energy to be supplied from January through December, 2000. The data shown below are default values, and do not necessarily reflect the energy that NewEnergy will supply.)

NewEnergy

Electricity can be generated in a number of ways with different impacts on the environment. The standardized environmental information shown below allows you to compare this electricity product with electricity products offered by other electric suppliers.

Energy Source

Default values are shown which represent 1996 regional averages.

Coal	49%
Gas	7%
Hydroelectric (large)	2%
Nuclear	34%
Oil	6%
Renewable energy	
Captured methane gas	0%
Fuel cells	0%
Geothermal	0%
Hydroelectric (small)	0%
Solar	0%
Solid waste	2%
Wind	0%
Wood or other biomass	0%

Renewable energy sources subtotal 2%

TOTAL 100%

Air Emissions

The emission data given are default values and represent the average amount of air pollution associated with the generation of electricity in the region. This amount is compared to the New Jersey benchmark. The benchmark approximates the average emission rate for all electricity generation in New Jersey.

CO₂ is a "greenhouse gas" which may contribute to global climate change. SO₂ and NO_x react to form acids found in acid rain. NO_x also reacts to form ground level ozone, an unhealthy component of "smog."

Energy Conservation

NewEnergy is not investing in energy conservation measures for this electricity product. Energy conservation measures means less electricity needs to be generated and pollution is avoided.

Avoided generation	Avoided Air Emissions
0 KWh	0 tons CO ₂
	0 tons NO _x
	0 tons SO ₂

See your Terms of Service for further information regarding this label. You may also call NewEnergy for additional information or a copy of the Terms of Service at (800) 638-1879.
